ABSTRACT

The checklist of Iraqi crabronid wasps has been updated due to this work. A total of 67 species are listed belonging to 29 genera, across 10 tribes within five subfamilies. The species distribution is also provided, and an identification key was developed to differentiate the high taxa.

Keywords: Apoid wasps, Hymenoptera, Iraqi fauna, Square-headed, Iraq, Taxa.

INTRODUCTION

The family Crabronidae, is commonly referred to as square-headed wasps, was defined by Bohart and Menke (1976). This family is traditionally placed within the superfamily Apoidea, which includes bees, sphecoid wasps, and apoid wasps. Historically, it was classified under the group Spheciformes, which also includes Ampulicidae, Sphecidae, Crabronidae, and Heterogynaidae (Melo, 1999).

In Iraq, several taxonomic studies have been conducted on this family. For instance, Antropov (2007) described *Guichardus assyriacus* Antropov, 2007, and Schmid-Egger (2007) recorded *Lithium baghdadensis* Schmid-Egger, 2007. Augul (2017) developed a key to the species of *Cerceris* Latreille, 1802. Later Hamodee *et al.* (2023) recorded two new species of *Cerceris*, including *Cerceris dorsalis* Eversmann, 1849 and *Cerceris priesneri* Mochi, 1939. Furthermore, Hamodee and Shafeeq (2023) described and illustrated a new taxon, *Oxybelochardus iraqensis*; as well as the female of this taxon was described and illustrated by Augul and Hamodee (2025).

This investigation has potential ecological significance, serving as an indicator of biodiversity health. Therefore, the study aims to provide valid names, update the Crabronidae list, and present synonyms and distribution data.

Crabronid wasps

MATERIALS AND METHODS

Sampling: An irregular survey of the crabronid wasps was conducted from March 2023 to May 2024 across various areas, including the following provinces: Baghdad, Diyala, Wasit, Al-Anbar, and Salahaddin. Surveys were performed in both cultivated and wild fields, including plants, land, and potential nesting sites such as dry tree branches. Collections were made by the team from the Iraq Natural History Research Center and Museum, University of Baghdad using aerial and sweep nets.

Examination of Specimens: Wasps were preserved after drying and pinning, accompanied by the collection date, location, and taxonomic information. Morphological analysis was performed using a dissecting microscope (OPTIKA) and an iPhone X-Max camera, with illustrations produced using a Camera Lucida. Scale bars were included in the images for reference.

Identification: The subfamilies, tribes and genera were identified applying the keys of Bohart and Menke (1976), adapted for Iraqi specimens obtained in this study. The scientific nomenclature was updated and cross-checked with Pulawski (2003), GBIF Secretariat (2024), and other catalogues, relevant checklists, and articles referenced under the distribution of species sections.

Terminology and abbreviations: The morphological terminology used in the identification follows the framework established by Bohart and Menke (1976). The abbreviations used in the current paper are as follows:

INHRCM- Iraq Natural History Research Center and Museum –University of Baghdad; S- sternum; SMC- submarginal cell of forewing; T- tergum.

RESULTS AND DISCUSSION

This study reports 67 species of crabronid wasps from 10 tribes, 5 subfamilies, and 29 genera. The distribution of these species is also provided.

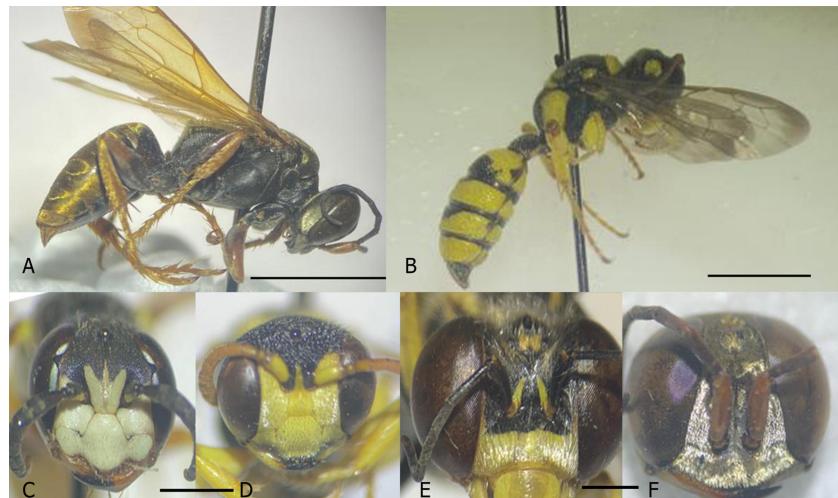

Key to subfamilies and tribes of Crabronidae:

- | | | |
|--|-------|-------------------------|
| 1-Gaster petiolate, composed of sternum I only (Fig.A) | | |
| Pemphredoninae | | Forewing with three SMC |
| (Fig.B) | | Psenini |
| - Gaster variable, sessile (Pl. A); if petiolate composed of T and S (Pl. B) | | 2 |
| 2- Clypeus tripartite (Pl. C, D) | | Philanthinae |
| - Clypeus not divided (Pl. E, F) | | 4 |
| 3- Inner orbit of compound eye notched (Pl. C) | | Philanthini |
| - Inner orbit of compound eye complete (Pl. D) | | Cercerini |
| 4- Inner orbits strongly converging above or holoptic (Fig. C); midtibiae with two apical spurs (Fig. D) | | Astatae |
| Eyes holoptic in males (Fig. C) | | Astataini |

BULLETIN OF THE IRAQ NATURAL HISTORY MUSEUM

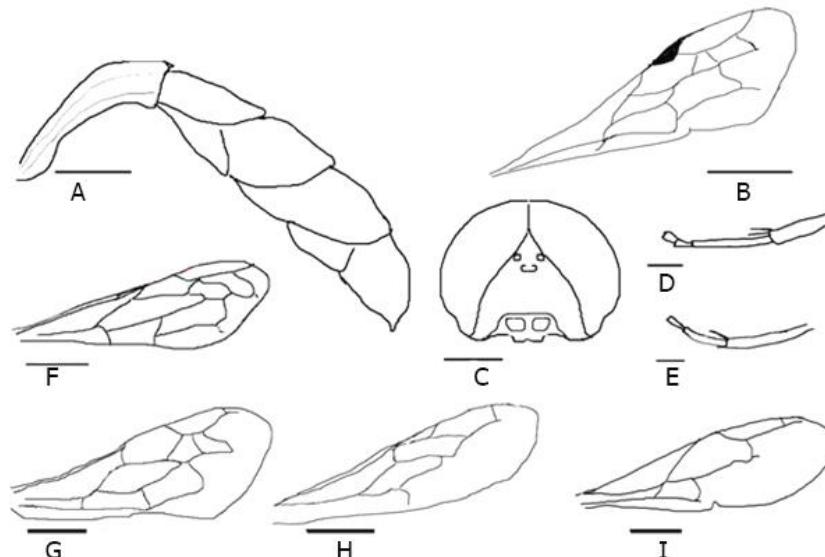

Hamodee, Sh. A.

- Inner orbits variable, parallel, converging below; if converging above, midtibiae with one apical spur (Fig.E) 5
- 5- Antennal sockets entry way above frontoclypeal suture (Pl..E) Bembicinae
 - Prestigmal distance of SMC in forewing markedly longer than half total cell distance (Fig. F) Bembicini
- Basal scape insertion just above or contiguous with frontoclypeal suture (Pl. F)Crabroninae..... 6
- 6- Forewing with three SMC (Fig. G)..... Larini
- Forewing with one or two SMC (Fig. H, I)7
- 7- SMC separate from discoidal cell (Fig.H) Crabronini
- SMC merged with discoidal cell (Fig.I) Oxybelini

Materials (2♂♂): Al-Anbar Prov., Al-Fallujah, Halabsa, 33°20'12.5"N 43°43'08.5"E, 24.v.2023.

Distribution: Iraq (Morice, 1921). Greece, Portugal, Spain, Afghanistan, China, Cyprus, India, Iran, Jordan, Kazakhstan, Kuwait, Oman, Pakistan, KSA, Syria, Tajikistan, Turkmenistan, UAE, Uzbekistan, Algeria, Cameroon, Eritrea, Ethiopia, Libya, Mauritania, Morocco, Somalia, Sudan, and Tunisia (Jahantigh *et al.*, 2017).

Oxybelus mucronatus (Fabricius, 1793)

Distribution: Iraq (Antropov, 2017). Austria, Belarus, Belgium, Bulgaria, Croatia, Czech Republic, Finland, France, Germany, UK, Greece, Hungary, Italy, Latvia, Lithuania, Luxembourg, Poland, Portugal, Romania, Serbia, Slovakia, Spain, Sweden, Switzerland, Türkiye, Ukraine, Afghanistan, China, Cyprus, Iran, Jordan, Kazakhstan, Kyrgyzstan, Russia, Syria, Tajikistan, Turkmenistan, and Uzbekistan, Morocco, and Tunisia (Jahantigh *et al.*, 2017).

Genus, **Oxybelochardus** Hamodee and Shafeeq, 2023

Oxybelochardus iraqensis Hamodee and Shafeeq, 2023

Materials (3♂): Baghdad Province, Al Moshahda, 33°36'10.7"N 44°14'13.6"E, 3.xi.2023.

Distribution: Iraq (Hamodee and Shafeeq, 2023).

Tribe, **Palarini**

Genus **Palarus** Latreille, 1802

Palarus fulviventris Latreille, 1812

Distribution: Iraq (Antropov, 2017). Iran, Kazakhstan, Oman, KSA, Syria, Tajikistan, Turkmenistan, UAE, Algeria, Egypt, and Libya (Jahantigh *et al.*, 2017).

Palarus laetus Klug, 1845

Distribution: Iraq (de Beaumont, 1961). India, Iran, Kuwait, Oman, KSA, UAE, Algeria, Djibouti, Egypt, Morocco, and Tunisia (Jahantigh *et al.*, 2017).

Tribe, **Trypoxylini**

Genus, **Trypoxylon** Latreille, 1796

Note: This genus was recorded in Iraq as *Trypoxylon* sp. by Kaddou (1967).

CONCLUSIONS

In conclusion, the fauna of crabronid wasps in Iraq is highly diverse presenting intriguing and unresolved challenges regarding their identification and distribution across various environments. Nevertheless, we anticipate that this revised checklist will serve as a crucial foundation for addressing most of the problems related to this group of species in Iraq. We

BULLETIN OF THE IRAQ NATURAL HISTORY MUSEUM

Hamodee, Sh. A.

recommend further research on of these in the various parts of Iraq.

CONFLICT OF INTEREST STATEMENT

The author states that there are no conflicts of interest associated with the investigation presented in this manuscript.

دبابير الكابرونيد، قائمة محدثة من العراق

شذى عبد اللطيف حمودي*

* مركز بحوث ومتاحف التاريخ الطبيعي- جامعة بغداد، بغداد، العراق.

الاستلام: 2024/11/24. المراجعة: 2025/4/23. القبول: 2025/5/1. النشر: 2025/6/20

الخلاصة

حدثت قائمة دبابير الكابروند العراقية خلال هذه الدراسة. حيث إدرج 67 نوعاً ينتمي إلى 29 جنساً، موزعة على 10 قبائل ضمن خمس عوائل. كما تم ذكر توزيع الأنواع مع تصميم مفتاح تشخيصي لعزل الأصنوفات العليا.
