Abstract

Sociolinguistic variation in online chatting encompasses diverse factors like language choice, register, tone, and even emoji usage, reflecting individual identities, social norms, and cultural backgrounds. It's a rich field for studying how language evolves and how people express themselves in digital communication contexts. The aim of studying sociolinguistic variation in online chatting is multifaceted. It involves understanding how language varies within digital communication platforms, such as social media, messaging apps, and online forums, based on factors like demographics, social context, and linguistic features. The way the research was written is analytical and descriptive. The findings of sociolinguistic studies emphasize the complex relationship between language and society, shedding light on how language operates as a tool for social identity, power dynamics, and communication within communities.

1.1 Introduction Sociolinguistics can be defined as the study of the sociological aspects of language. The discipline concerns itself with the part language plays in maintaining the social roles in a community. Sociolinguists attempt to isolate those linguistic features that are used in particular situations and that mark the various social relationships among the participants and the significant elements of the situation. Influences on the choice of sounds, grammatical elements, and vocabulary items may include such factors as age, sex, education, occupation, race, and peer-group identification, among others. For example, an American English speaker may use such forms as "He don't know nothing" or "He doesn't know anything," depending on such considerations as his level of education, race, social class or consciousness, or the effect he wishes to produce on the person he is addressing. In some languages, such as Japanese, there is an intricate system of linguistic forms that indicate the social relationship of the speaker to the hearer. Language in the digital context is heavily influenced by social factors. Factors like cultural norms, social groups, age, education, and geographical location shape how people communicate online. Social media, for instance, has its own language trends, hashtags, and styles that evolve based on these factors. Additionally, the rapid spread of information online also contributes to the adaptation and creation of new language patterns and expressions (The Editors of Encyclopedia Britannica 2023).

1.2 Problem of The Study The problem in this study it can be difficult to find and access relevant linguistic data, especially when it comes to languages or dialects that are less widely spoken or documented. Sociolinguistic frontiers: Emancipation and equality The great accomplishments of Sociolinguistics its liberal and scientific claims that all language are equal in value. but in fact race, gender, class and more. these challenges to capture the full picture. Heller argues that the scholarly techniques has neglected to ask how the language continues to serve as terrain for the making of social difference and social inequality. (Heller 2020) language change and development: historical linguistics language can change and develop by itself slowly. language can change because of adaptation of development and pattern change and system of society life. one problem is the documentation and preservation of endangered language as language evolve and change over time limited access to speaker lack of written records and the erosion of language knowledge within communities hinder the

preservation efforts. (Dinillah Harya 2016)Unveiling the Dynamics of Sociolinguistics: the interplay of language and society the study of the dynamic relationship between language and society profound impact on human interaction .one of the main problem when certain language or dialects are marginalization limited opportunities individuals and communities who speak those languages. language variation dialects code-switching and the transformative a key focal points in Sociolinguistics (Abdullaev 2023) Problem in the field of linguistic diversity have revolved around various issues and challenges:

1_ Language Endangerment .many languages around the world are endangered at risk of extinction due to factors such as globalization cultural assimilation .

2_ Linguistic Discrimination .refers to the unfair communities on their language or dialect this includes exclusion from educational opportunities marginalization .

3_ Language policies .policies that favor one language over others or discourages the use of minority .

4_ Inadequate language Education .in many context do not adequately address linguistic diversity limited proficiency language .

5_ Limited Research and Documentation .many languages especially minority and Indigenous have not been extensively documented or research.

6_ Lack of Awareness and recognition .often overlooked or undervalued to lack awareness and recognition of its important.

1.3 Aims of The StudyThe aim of this study is to discern and examine the linguistic features that are peculiar to the kind of written English used in online chat rooms using the following research question: What characterizes and distinguishes the kind of written English used in online chatrooms in relation to conventional written English? previous studies in the field of Sociolinguistic diversity have focused on various aspects of language society relationship between language and social factors:

□ 1_ Examining language variation and change .how language varies and changes within communities factors like age ,gender ,social class and ethnicity.

□ 2_ Exploring language attitudes and ideologies .analyze people's perception and beliefs about different languages and dialects .

□ 3_ Investigating language maintenance and shift .focuses on why language are preserved or lost within communities exploring policies migration and globalization.

□ 4_ Education and literacy .effective strategies for language and literacy instructions present ongoing challenges.

1.4 The Significance of The StudyThe study of Sociolinguistic diversity Online the digital ear on Communication patterns and Social interactions mainstream Source of data for Sociolinguistics reflecting the ubiquity of such media and the Centrality of their role in peoples every day speech as a well As our personal and professional reality become more technologized there is however an urgent need to engage with a deeper understanding of the current and evolving digital economy .study Sociolinguistic diversity Online provides valuable insights into the Complex dynamics of languageus identity expression and social interaction in the digital age it not only helps us understand the multifaceted nature of online communication but also has practical implications for issues like digital inclusion and language policy. Sociolinguistics in an increasingly technologized reality (De Gruyter 2022).

2.1 Literature ReviewFunredes and Union Latine have designed an original research method to measure linguistic diversity in cyberspace. The aim was to use search engines and a sample of word-concepts to measure the proportionate presence of these concepts in their various linguistic equivalences (in Latin languages, English and German) in cyberspace. The research, undertaken from 1996 to 2008, has enabled interesting indicators to be built in order to measure linguistic diversity. Additionally, some basic evaluations of the cultural projections associated with these languages (mentioned above) were undertaken.This paper describes the research method and its results, advantages and limitations. It also provides an overview of existing alternative methods and results, for comparison. The paper concludes with the examination of different perspectives in a field which have in the past been considered to have

been characterized by a lack of scientific rigor. This has led to some misinformation about the dominant presence of English on the Web. It is a topic that is only now slowly attracting due attention from international organizations and the academic world (Daniel Pimienta et al.,2009).

2.2 The Evolution of Communication in the Digital Era

Current theories of language and messaging apps Like WhatsApp acquisition emphasis the role of language input and children interaction with the environment as a potential language is becoming ever-increasingly embedded into our daily lives .one of the key reasons for the popularity of messaging is their simplicity and user-friendly interface In the digital era, communication became faster, more flexible, and more dynamic. Distance and time do not hinder communication anymore. Anyone from anywhere in the globe can arrange meetings and communicate anytime seven days/ twenty-four hours merely using a computer or a cell phone connected to the Internet. Time and space acquire new meanings and dimensions.Frontiers and time delimitations dissipate. Communication in the digital era has evolved significantly, with advancements in technology shaping how people interact and exchange information. Traditional forms of communication, such as letters and landline phones, have been largely replaced by instant messaging, social media platforms, video calls, and emails. These digital tools have made communication faster, more accessible, and more interactive. The rise of social media has revolutionized how people connect and share their thoughts, ideas, and experiences with a global audience in real time. Platforms like Facebook, Twitter, Instagram, and Linkedin have become integral parts of everyday communication, allowing individuals to stay connected, build communities, and even mobilize for social causes.(milavulch anova et al., 2017)

3.1 MethodologyThe data used in this study have been collected from an English chat room called “The English Room”. The messages sent on the chat have been observed and examined in the search of non-conventional linguistic features peculiar to this kind of written English with the hopes of answering the earlier-mentioned research question. The method used in this study is qualitative because conclusions have been drawn regarding the reasons people may have for choosing certain linguistic means to express themselves when chatting. Moreover, the findings from the chat room have been compared to a predetermined taxonomy as to what to look for when examining the linguistic features characteristic of the kind of written English used when chatting online. It follows from the results that language is adapted to the medium and context where it is used, and that the kind of written English used in online chatrooms is no exception to this.On Internet Relay Chat (IRC), various restrictions in the form of temporal, spatial and social ones function as significant confining conditions that regulate and determine the form and size of communication in different ways. Most of the language features peculiar to IRC are used in order to save time and space. However, some features are used in order to reflect spoken language, and to demonstrate mastery of the social conventions of IRC. Besides, some language features can be used for several of these purposes.

3.2 Data CollectionThe selected data have been collected from What's App program , chatting, and it has been chosen as four samples. The study focuses on the linguistic differentiation that occurred between the variety of chatters' writing. The study also deals with which one of those chatting is the most different in terms of culture and differs in all the chattings that belong to both genders women and men.

3.3 Data AnalysisDatum 1 Sender /Mariathe sender initiates the conversation by composing a message and sending it to the recipient uses formal and specific terminology based on the topic being discussed and he also uses difficult vocabulary.Receiver/SaraThe recipient plays an important role in decoding and understanding the message The recipient begins the process of understanding and analyzing the message and understanding a mixture of abbreviations and emojis depending on the situation. He uses vocabulary that is inaccurate in terms of linguistic structure and also difficult vocabulary.Datum 2Sender/Zinathe sender initiates the message in the communication process can be understood as a series of interconnected steps that work together to ensure the successful transmission and understanding of a message .he used easy vocabulary and also uses precise simple and uncomplicated language Receiver/MunaThe recipient plays an important and vital role in understanding the message he received from the sender and what the

meaning of the message is. The recipient understands the meaning and decodes it. The recipient uses terms that are not easy and does not explicitly adhere to specific linguistic rules while writing his message. Also, his rules are not secure in terms of linguistic structure and are somewhat inaccurate in his words. Datum 3 Sender / Ahmed The sender plays an important role in the process of conveying the message and delivering it to the recipient. The sender uses language that is not simplified and complex in terms of linguistic structure and is not accurate and content in grammar to convey his understanding to the recipient in an easy and simple way. He also uses gestures to express his feelings at certain points. He uses language that is not formal and controversial. Also in his words and expression. Receiver/Maher The recipient plays a crucial role in understanding the meaning of the sender's message and what is important in it. It is interpreted. The recipient uses precise and structured language to clarify its transmission to the sender and ensure its understanding by the sender. The recipient uses precise and precise rules in terms of linguistic structure and also simple language in terms of the words and phrases required in this message. Formal, compact and concise in understanding and clarification. Datum 4 Sender /Khaled Fayyad the sender acts as the initiator the individual who formulates and transmits the message .He uses simple uncomplicated language and he also uses the correct grammar including choosing the words of the message and ensuring clarity in its intended meaning which leads to the senders skills in choosing his words. Receiver /Dear prof is the process by which the receiver takes center stage by interpreting the message it involves focusing and understanding the message he also uses difficult and imprecise vocabulary in grammatical structure .it also represents the ability and effectiveness to understand and send what the sender wants. Grammatical structure Men ✓ Women Easy language Men Women ✓ official language Men ✓ Women The correct rules Men Women ✓

4.1 Findings The findings of sociolinguistic studies emphasize the complex relationship between language and society, shedding light on how language operates as a tool for social identity, power dynamics, and communication within communities. However, it is important to note that the specific results and conclusions vary across different studies and the particular linguistic communities being investigated.

4.2 Conclusions Sociolinguistic diversity refers to differences based on social factors such as gender, age, race, occupation, and social class. It also includes the different ways that people use to express their social identities and interact with others. Linguistic diversity can be seen from several aspects, including pronunciation. Some societies may have pronunciation in words and sounds. They differ from others, and also the grammatical rules differ in the use of grammatical structures, as well as the age groups that use them in all societies, and the patterns of discourse are different based on the people, their conversation, and the factors specific to this society. We mentioned previously that sociolinguistic diversity is a common phenomenon in all languages and societies, and it also confirms the complex relationship between language and grammatical structure, as Linguistic diversity is an important and effective model for communication between societies .The aim of the conclusion for the samples from grammatical samples and words is likely for several reasons, including how language works, grammar, how words are combined to form sentences. Through studying grammatical samples, we learn how to compose and use language in a correct and reliable way, and to improve our communication skills, and our speech will be guaranteed in a good way, well understood, and more communicative and persuasive, and it also helps us with skills. Writing and Reading: It becomes easier to read and understand text and form a correct, grammatically and logically coherent sentence.
